All major schema types are supported (DTD, Relax NG, Schematron, XML Schema).

Users can easily create, edit and run an XSLT Stylesheet and preview the transformation result.

Users can configure XMLBlueprint XML Editor to work with any 3rd party XML validator or XSLT processor. Users can add and run additional tools to further enhance XMLBlueprint's functionality.

Using the XPath Evaluator, users can visually analyze, test, and debug XPath expressions.

A real-time outline displaying the elements in the XML document provides quick access to the various parts of the document.
