Industry: [Law](#)

Houston, Texas (May 29, 2009) --- National firm Hill Schwartz Spilker Keller LLC (HSSK) announced the successful utilization of Remlox™, a patent pending forensic ESI collection tool, in Africa, Central America, Europe and the United States.

The use of Remlox allowed the firm to remotely acquire forensic images of hard drives located

throughout Nigeria, Costa Rica, England and various locations in the United States. Before Remlox, such sector-by-sector forensic imaging required onsite collection by one of the firm's [computer forensics](#) experts. HSSK distributed Remlox to several hundred custodians, avoiding the cost and logistical issues of on-site imaging. Complete, [encrypted forensic images](#) were verified in HSSK's Houston Computer Forensics lab, the nation's first non-governmental lab to be accredited by the American Society of Crime Laboratory Directors/Laboratory Accreditation Board (ASCLD/LAB).

"By remotely acquiring forensic images, Remlox answers a great need in the industry." said David Greetham, Computer Forensics practice director at HSSK.

“Remlox now allows attorneys to forensically acquire ESI, without the usual high costs associated with traveling to different remote locations, while negating the risks associated with self collection.”

Remlox runs directly from a pre-configured external USB drive that is sent to the custodian and requires no installation. It performs a tamper proof system audit of the acquired computer and has the option to forensically acquire the contents of RAM. Greetham added, “Using Remlox is quick and simple. On one occasion, we sent over 350 units to individual locations in two days and had the data back in our lab for verification within one week. On other occasions, we have utilized Remlox in locations that would simply be cost prohibitive to travel to.”

Remlox utilizes AES 256 bit encryption, to protect the integrity of the forensic images in transit.

Hill Schwartz Spilker Keller LLC (www.hsskgroup.com) is a leader in providing Computer Forensic services. HSSK’s Houston lab holds the distinction of being the first non-governmental lab in the United States to obtain ASCLD accreditation. HSSK also provides business valuation, litigation consulting and [forensic accounting services](#) from its offices in Houston, Dallas and Washington D.C.
