Industry: [Healthcare](#)

A sanitising spray that kills 99.99% of Viruses, Bacteria and Germs is now available for purchase in the UK. The SaniGuard wipes, spray and fogger products were invented by David Morgan, president of DEM Technology in the United States.. After patenting the product he was awarded EPA registration for its use on food contact surfaces in 1996.

One benefit of the spray is that there is no "wet dwell" time, meaning that users don't need to wipe the product away prior to it being effective. According to US laboratory reports, the product [kills 99.99% of germs](#) in 30-45 seconds. It also exceeds the requirements of EN1276 in Europe.

Jim Taylor, formerly president of Smith & Nephew and now CEO of Saniguard International, based in Chorley, Lancashire, said: "SaniGuard contains a unique configuration of quarternary

ammonium compounds (QUATS) and other proprietary components, which allow for the elimination of microbes that regular QUATS alone cannot kill.”

The dry-on-contact spray can be used in between regular cleaning on “hot spot” areas such as telephones, computer keyboards, light switches, door knobs and other areas that are frequently used and rarely cleaned. SaniGuard leaves no film or moisture on surfaces.

The spray is effective against Swine Flu, MRSA, HIV-1, herpes, herpes simplex 1 and 2, salmonella typhi, staphylococcus aureus, streptococcus epidermidis and pseudomonas aeruginosa and fungi such as trichophyton interdigitolo (Athlete’s foot).

MisterSterile.com also offers the Total Release Fogger in a single-release aerosol, which is claimed to sanitise an entire room with the press of a button within 15-20 minutes. The product is available in small room (155ft<sup>2</sup>) and large room (625ft<sup>2</sup>) sizes.

The company says this product is safe for all surfaces and helps to stop the transmission of germs in high traffic areas such as lobbies, waiting rooms, hospital wards, GP surgeries and patient care facilities.

Anti-Bacterial, [Anti-Virus Swine Flu prevention](#) products from MisterSterile.com ‘Mr Sterile.com’ is authorised by SaniGuard International and have launched their new website to service the explosive demand for anti-bacterial, anti-virus products.

With the recent outbreak of Swine Flu, basic personal hygiene has become increasingly important, making Mister Sterile a must for personal, travel, home, office or school.
