

# GamaSec Launches A Free Trial Security Scanner That Identifies Security Weaknesses In Web Applications

Released on: September 03, 2009, 4:55 am  
Author: Tom Rand  
Industry: [Internet & Online](#)

GamaSec has launched a free trial option of its [web vulnerability scanner](#), which allows companies to check for Cross Site Scripting (XSS), SQL injection, Code Inclusion etc.. ) as well as site exposure risk, ranks threat priority, produces highly graphical, intuitive HTML reports, and indicates site security posture by vulnerabilities and threat exposure

The GamaSec Free trial of Web Vulnerability Scanner (WVS) is available immediately at: <https://www.gamasec.com/gsf/FreeTrial.aspx>

According to the Gartner Group, "97% of the over 300 web sites audited were found vulnerable to web application attack," and "75% of the cyber attacks today are at the application level."

Everyday there are thousands of new internet users online. Despite the fact that more people all the time are making purchases on the internet, there are a great deal of consumers who remain uneasy about the process and because of that are timid about the internet. Consumers are becoming more and more smarter, more savvy and more guarded about what can put them at risk. Online customers need to be confident that their personal information is safe and that their privacy will be upheld at all times.

"Companies don't realize the danger their web sites are under and are therefore reluctant to invest in web vulnerability scanners. Consequently, security officers don't have the tools to protect their websites. The GamaSec free trial scanner will give security officers access to a [professional security tests](#) of web applications and detects Cross Site Scripting, SQL Injection and other web application vulnerabilities and produces recommended solutions that can fix or provide a viable workaround to the identified vulnerabilities, when you need them, not when it is already too late," said Avi D.Bartov, GamaSec CEO.

GamaSec vulnerabilities scan requires no installation, no set-up, no hardware purchases, no software development, and no IT security expertise. Customers do not need any special training to use it.

### **About GamaSec Web Vulnerability Scanner**

GamaSec web application scanner crawl the entire website, analyze in-depth each & every file, and display the entire website structure. The [GamaSec Scanner](#) built from the ground up on a completely different technology backbone than its competitors; GamaSec goes beyond signature-based tools to find more "real" vulnerabilities.

Once the vulnerability scan is completed, GamaSec deliver an executive summary report to management and a detailed report to the technical teams. Both reports list the vulnerabilities found along with the severity levels of each vulnerability, as well as appropriated recommendations.

Gamascan's vulnerability assessment scan provides real-time vital business solutions suitable for organizations of any size operating on the internet.
