Concilio Launches RiskPortal.net, Online Risk Management For Teams

Released on: April 01, 2010, 12:01 am

Author: Concilio

Industry: Management

Risk management is often seen as a task of specialized risk consultants or project managers. RiskPortal.net makes risk management a team effort with an easy to use online risk application (SaaS, Software as a Service).

Riskmanager

An entire team can access, add and edit its project risks online using an internet browser and devise measures to optimize them. RiskPortal.net creates transparency: it shows who is responsible for which risks and also shows what progress is being made to implement measures.

Risk analysis

Riskmanager enables team members to analyze risks visually. Using digital sticky notes, a team member creates a picture of the effects and causes of a particular risk and the impact it has in terms of money, lead time and quality. These bowtie shaped pictures are the basis for effective responses which can be attached to the risk sticky notes. See http://riskportal.net/help/analyse-risks/en-us/ for the online introduction video on risk analysis.

Prices

The fee for Riskmanager is based on the number of active projects of a

customer. The number of people that can access a project is unlimited. The fees per subscription type are listed below:

- -Project Edition: 1 project for 95 Euros per month or 129 US Dollars per month
- -Team Edition: 10 projects for 495 Euros per month or 695 US Dollar per month

Free demo

A fully working version of RiskPortal.net is available for free during 30 days.
